

The finest gemstone globes in the world!

The Jere Wright Global Difference

All globes are not created equal. Our Jeweler Quality Gemstone Globes are the finest globes in the world and are the epitome of great craftsmanship.

- A Jere Wright Global gemstone globe is truly the genuine article. We specify and inspect all of the high quality materials that go into our globes, including:
 - Twenty-five exquisite Grade A gemstones are used for the oceans and countries of the world.
 - Our globes contain no faux gemstones as with some manufacturers. Our oceans are made of reconstituted genuine Grade A gemstones with a 15% resin mix, not all resin as in lower quality globes.
 - Glittering gold and silver ribbon is used for the latitude and longitude lines.
 - Ten coats of clear acrylic are applied to protect the gemstone and precious metals.
 - The finest quality brass and pewter electroplating is used for our stands and mountings.
 - Our stands and fittings are lacquered to prevent them from tarnishing.
 - Because we do all this, our gemstone globes last forever and require virtually no care or maintenance. Simply dust them off occasionally and wipe smudges off with a damp cloth. That's all you'll ever have to do.
- Our globes are precision handcrafted. Our larger globes take over 1,000 man-hours to produce. Whole gemstones are hand cut in the shape of countries. Stones are not pieced together as with the globes of other manufacturers.
- Our globes are tensioned at each axis to ensure they rotate freely when you spin them and stay stationery when you don't. This provides extra stability and prevents against wear and tear.
- Finally, Jere Wright Global Gemstone Globes are put through a rigorous ten-point inspection before they are shipped. Before we issue the certificate of authenticity for each globe, we make sure it is in perfect condition. *We hope you'll agree -- it's a perfect world!*
